

Port of San Diego

The Port of San Diego manages San Diego Bay and its 34 miles of beautiful, natural waterfront for the people of California. The Port was established in 1962 under the Port Act and is charged with implementing the Tidelands Trust Doctrine. For over fifty years, the Port's five-member cities - Chula Vista, Coronado, Imperial Beach, National City and San Diego - have worked together to develop and promote commerce, navigation, recreation and fisheries on and around San Diego Bay. Self-funded, the port contributes \$9.2 billion annually to San Diego's economy, benefiting the community, local businesses and employees. The port's cargo maritime business includes two cargo terminals, Tenth Avenue Marine Terminal and National City Marine Terminal.
